Learn What is bar graph?

A bar graph is a chart uses bars (or columns) to show amounts.

From the graph

- The number of = 7

- The number of = 3

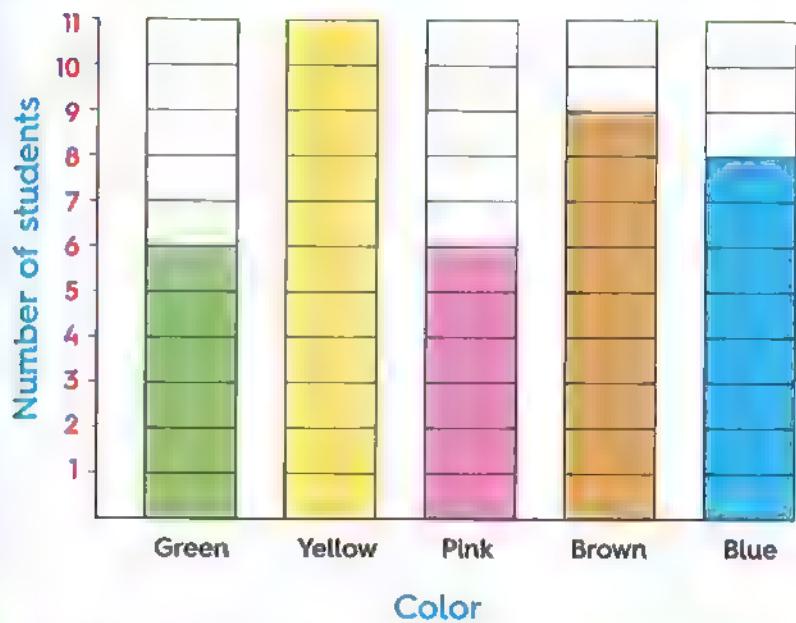

- The number of = 5

- The number of = 4

Notes for parents

- Help your child understand the bar graph, and then ask him/her to tell you what he/she recognized.
- Make sure that your child starts coloring from the bottom.

Favorite color

From the graph, complete.

- The number of students who liked yellow = _____
- The number of students who liked pink = _____
- The number of students who liked green = _____
- The number of students who liked brown = _____
- The number of students who liked blue = _____

- Ask your child to describe the data in the bar graph.
- Ask your child to explain how he/she uses the bar graph to complete the sentences.

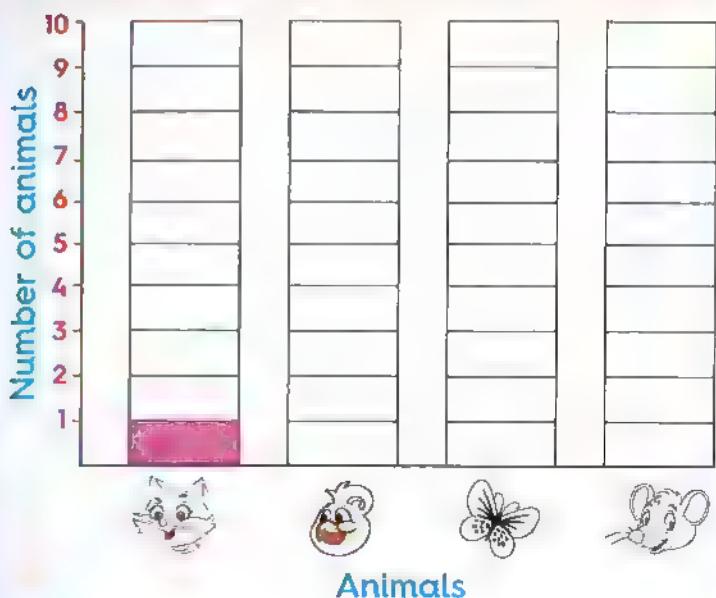

Exercise 1

Learn

Horizontal bar graph is another version of bar graph, the bars are going across the graph instead of up.

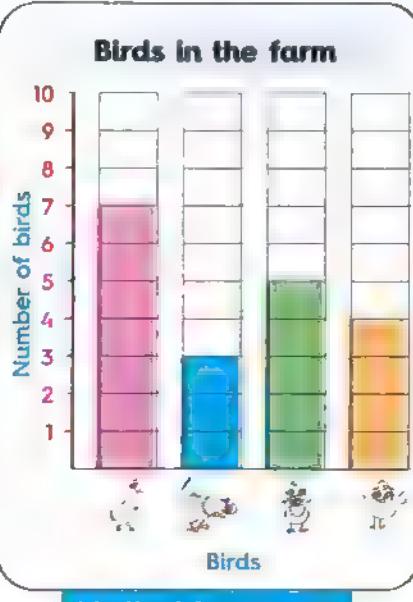

I have converted the same information from the vertical format into horizontal format.

Birds in the farm

Horizontal bar graph

Note :

The graphs look different but the information is the same in both.

Notes for parents

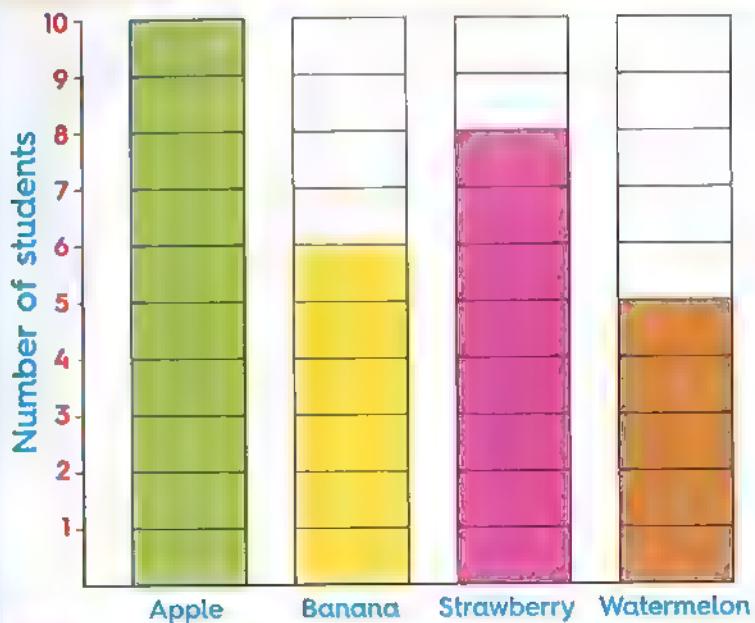

- Help your child know that the two bar graphs are the same. Both versions of the graph have bars of the same quantity.

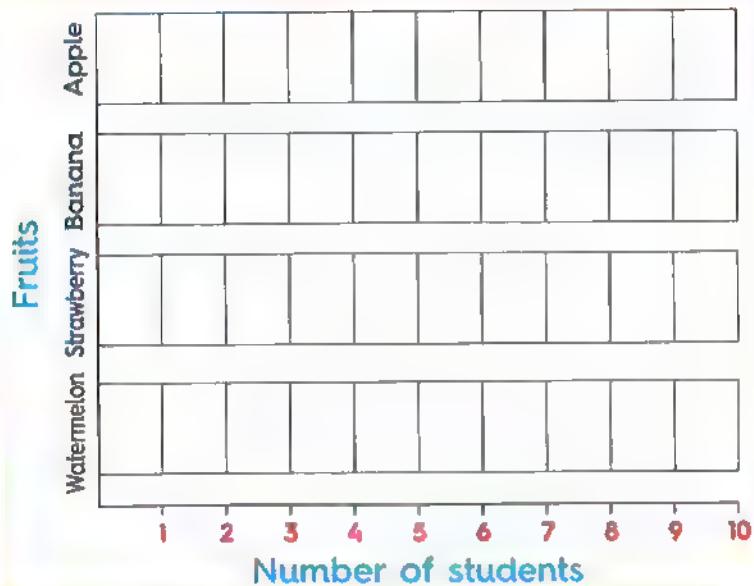

Check

Convert the same information from the vertical bar graph into a horizontal bar graph.

**Lessons
4 & 5**

- Table and bar graph
- Solving problems about data

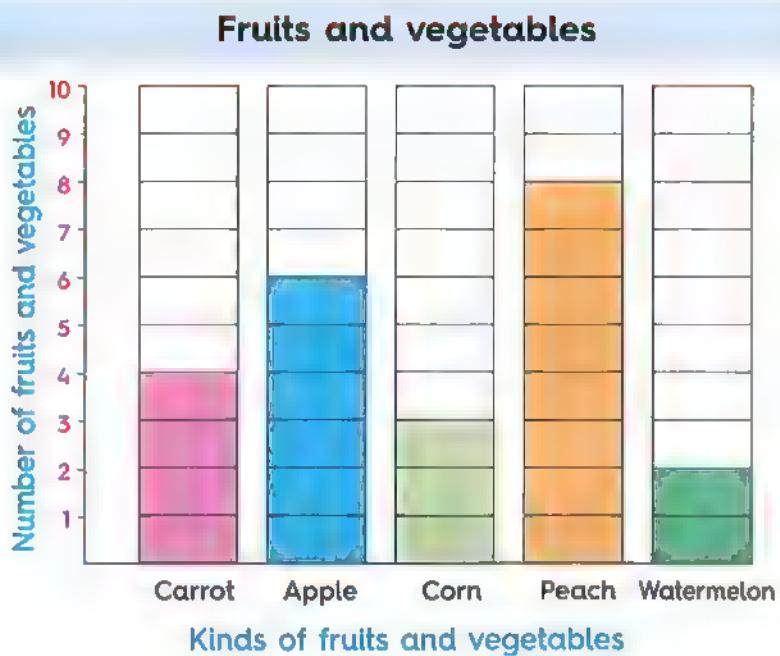

Learn Table and bar graph

- You can show data in more than one way.
- The following table shows the numbers of fruits and vegetables at the farm stand.

Fruits and vegetables	
Kind	Number
Carrot	4
Apple	6
Corn	3
Peach	8
Watermelon	2

- The following bar graph shows the same data.

Notes for parents

- Ask your child to explain how to convert the table to bar graph.
- Ask him/her to find the most and the least kind of fruits and vegetables in the bar graph.

Learn Solving problems about data

A bar graph is a way to represent data visually.

Reading a bar graph gives you information.

- Here are some information from the opposite bar graph :

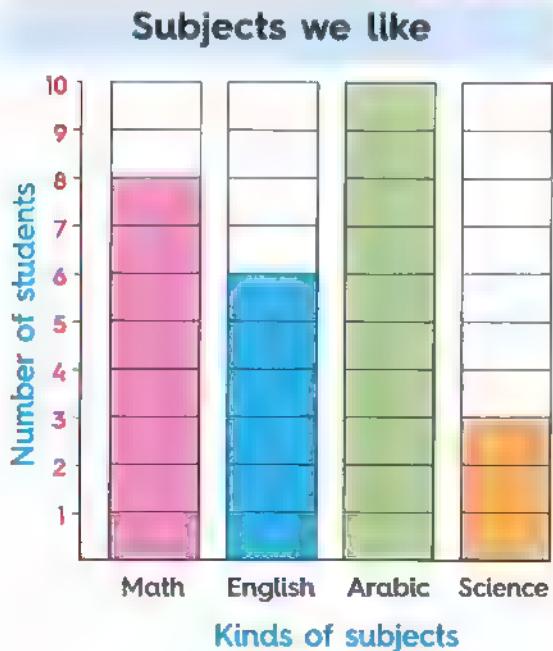

- The subject which liked the least is **science**.

- The subject which liked the most is **Arabic**.

- The number of students who liked math and English is **14**.

- The number of students who liked more Arabic than science is **7**.

You read this bar graph from bottom to top.

Think

You can add to solve a problem.

$$8 + 6 = 14$$

Think

You can subtract to solve a problem.

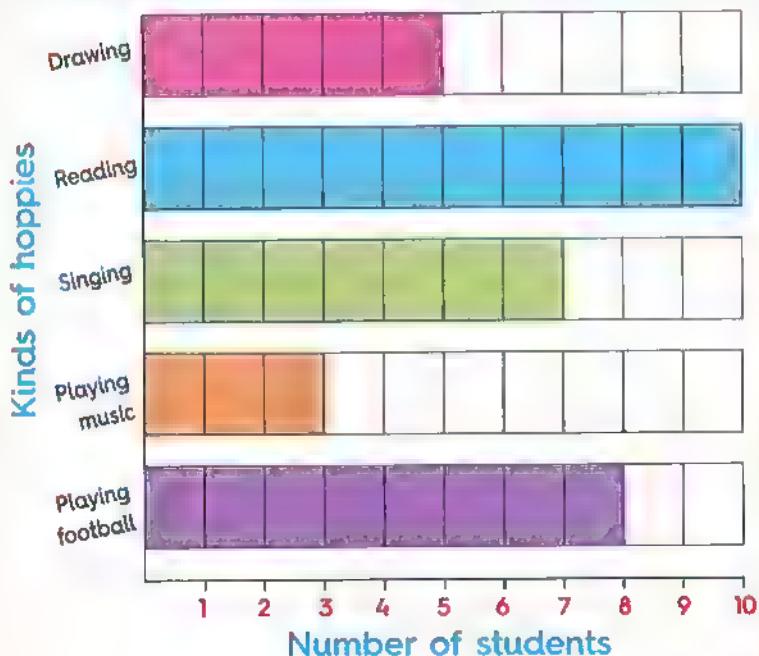

$$10 - 3 = 7$$

- To find the number of students who liked more Arabic than science, your child may count the rows between Arabic and science, or count up from 3 to 10 or subtract the smaller number 3 from the bigger number 10.

You read this bar graph from left to right.

Favorite hoppy

- Here are some information from the opposite bar graph :

The hoppy which liked the least is **playing music**.

The hoppy which liked the most is **reading**.

The number of students who liked drawing and singing in all is **12**.

The number of students who liked playing football more than drawing is **3**.

The number of students who liked reading , playing music and playing football all together is **21**.

Think

You can add to solve a problem.

$$5 + 7 = 12$$

Think

You can subtract to solve a problem.

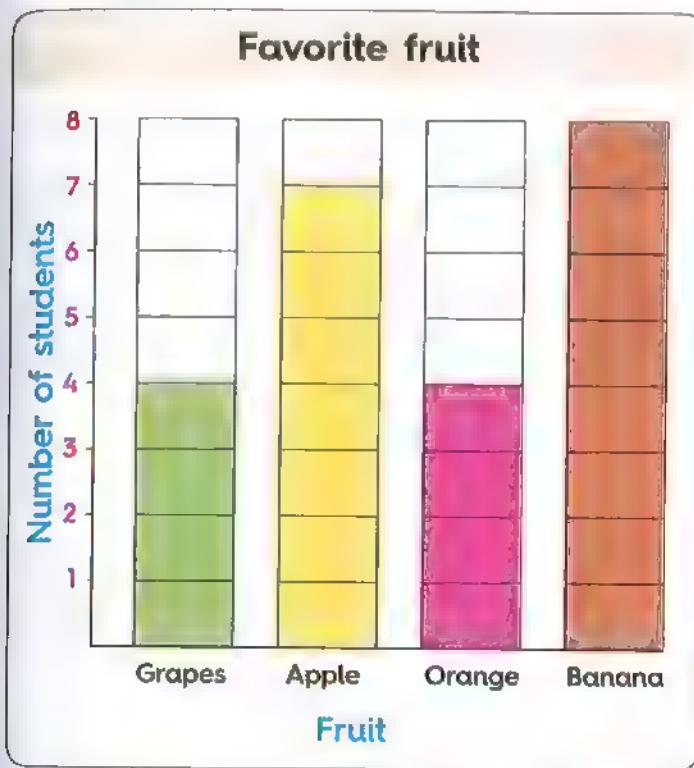

$$8 - 5 = 3$$

Think

You can add to solve a problem.

$$10 + 3 + 8 = 21$$

Use the bar graph to complete the table.

Ask your child to show you how to count by 2s and 10s using the chart.

Learn

Bar graph with a scale of 2

You can use any scale for a bar graph. Here are two bar graphs that show the same data with different scales.

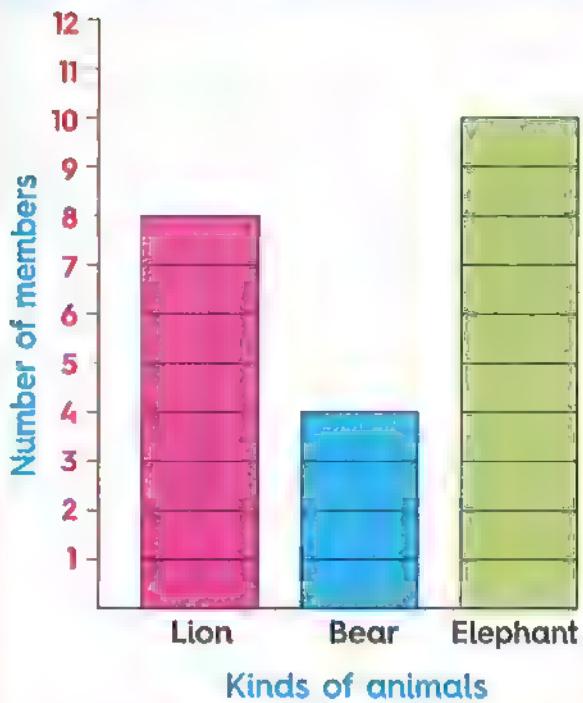

Each box in the bar graph of scale 1 represents 1 member.

Each box in the bar graph of scale 2 represents 2 members.

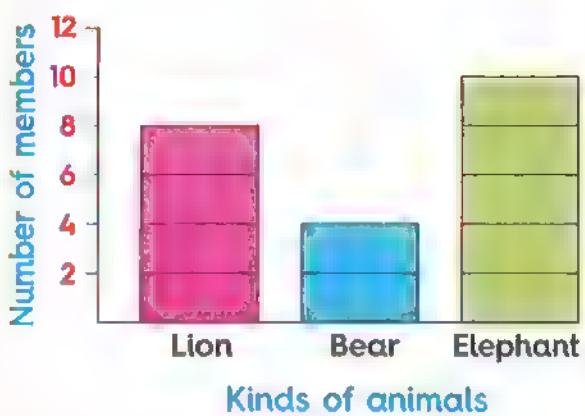

Mark used a scale of 1.

Learn

Bar graph with a scale of 10

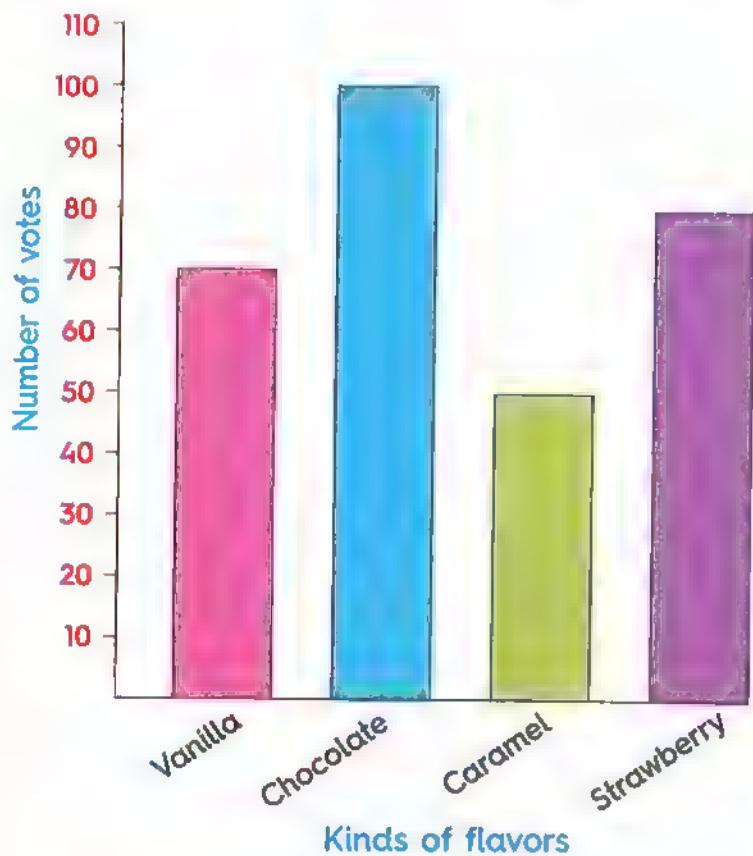

The following table is a voted table of 300 people for their favorite ice cream flavor.

The data on the table is represented on bar graph with a scale of 10 because the number of people is big.

Favorite ice cream flavor

Favorite ice cream flavor	
Flavor	Number
Vanilla	70
Chocolate	100
Caramel	50
Strawberry	80

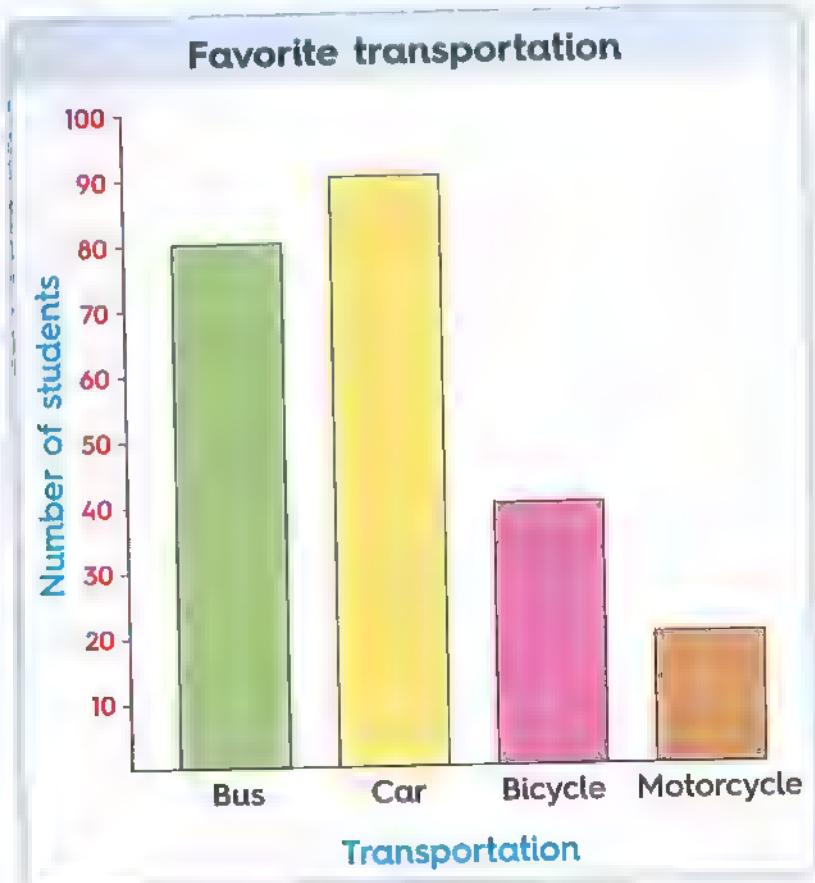

- Which ice cream flavor is liked the least ? *Caramel*
- Which ice cream flavor is liked the most ? *Chocolate*
- How many votes in all liked vanilla and chocolate ? $70 + 100 = 170$
- How many more votes liked strawberry than vanilla ? $80 - 70 = 10$

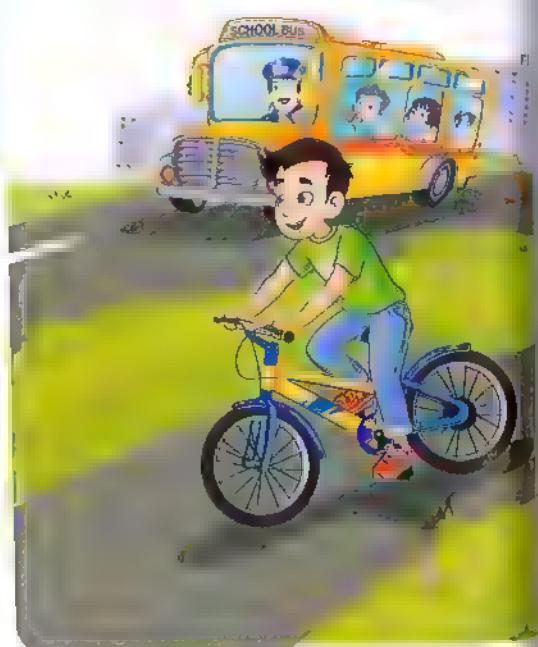

- Train your child to skip counting by 10s.

Pictograph

Learn Pictograph

A **pictograph** is another way to show data.

A pictograph uses pictures to tell how many.

Here are two pictographs that show the same data with different keys.

The key tells each ☺ represents 1 vote.

The key tells each ☺ represents 2 votes.

Amir's way

Favorite art materials	
Painter	☺ ☺ ☺ ☺
Marker	☺ ☺ ☺ ☺ ☺ ☺ ☺ ☺
Clay	☺ ☺ ☺ ☺ ☺
Crayons	☺ ☺ ☺ ☺ ☺ ☺
Colored pencils	☺ ☺

Key ☺ = 1 vote

Magy's way

Favorite art materials	
Painter	☺ ☺
Marker	☺ ☺ ☺ ☺
Clay	☺ ☺ ☺
Crayons	☺ ☺ ☺
Colored pencils	☺

Key ☺ = 2 votes
☺ = 1 vote

From the pictograph :

- The number of students who liked marker is **8**
- The number of students who liked clay is **5**
- The number of students who liked painter and colored pencils is **$4 + 2 = 6$**
- How many more students liked marker than crayons ? **$8 - 6 = 2$**

Notes for parents

- Make sure that your child understand that the key tells how many each picture stands for.

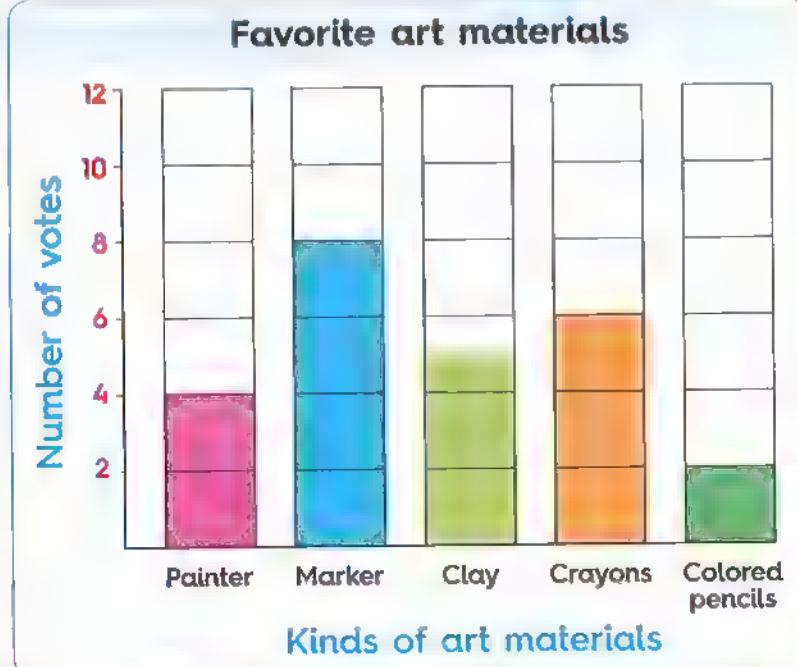

We can represent the data of the pictograph in a bar graph.

I converted the data on pictograph into bar graph and I preferred the bar graph with a scale of 2 to match the key of pictograph.

Favorite art materials	
Painter	2 smiley faces
Marker	4 smiley faces
Clay	3 smiley faces
Crayons	3 smiley faces
Colored pencils	1 smiley face

Key
= 2 votes
= 1 vote

Note :

In the above pictograph, the clay category shows 5 votes and to represent it on a bar graph with a scale of 2, you should stop halfway between 4 and 6.

From the graphs :

- The number of students who liked painter is **4**
- The number of students who liked crayons is **6**
- The number of students who liked marker and crayons is **$8 + 6 = 14$**
- How many more students liked clay more than colored pencils ? **$5 - 2 = 3$**

- Help your child understand that the two graphs look different but they show the same data.

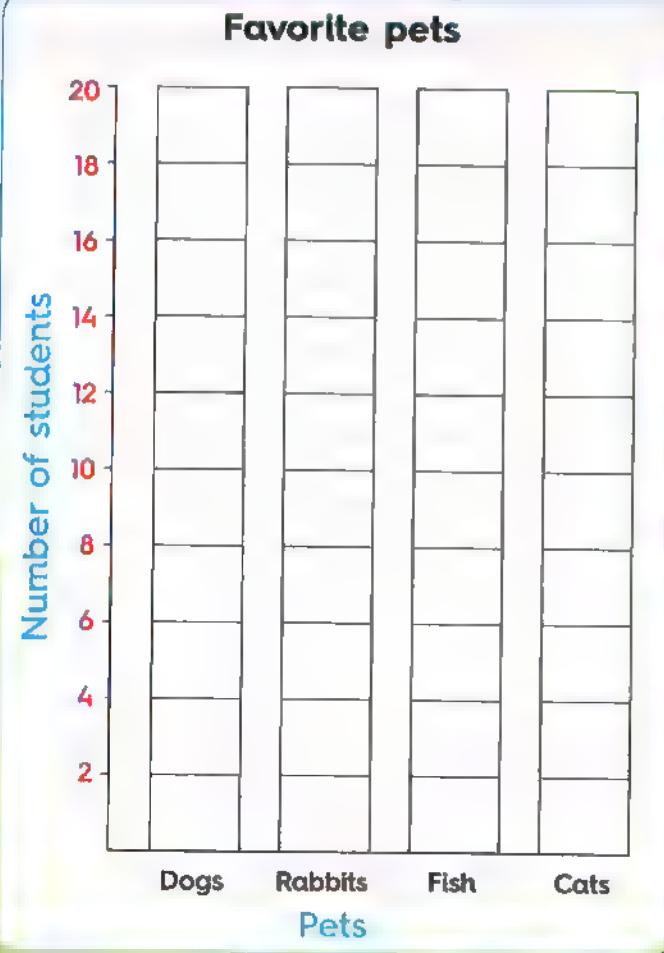

Check

Use the pictograph to color the bar graph.

Favorite pets	
Dogs	8
Rabbits	6
Fish	5
Cats	7

Key = 2 votes

Answer the questions :

- How many students liked fish ?
- How many students liked dogs ?
- How many students in all liked rabbits and cats ?
- How many more students liked rabbits more than fish ?
- Which pet is liked the most ?
- Which pet is liked the least ?

* Help your child make the bar graph and make sure that your child stands halfway between 2 numbers when he/she represents any odd number.

Learn Doubles fact

$$1 \text{ eye} + 1 \text{ eye} = 2 \text{ eyes}$$

Sometimes the number in each group is the same. That is called a double.

$$6 \text{ crayons} + 6 \text{ crayons} = 12 \text{ crayons}$$

↑

16 is the double
of **8**

When you add two numbers that are the same, the sentence is a doubles fact.
8 + 8 = 16 is a doubles fact.

Add. Write the sums.

$$5 + 5 =$$

$$9 + 9 =$$

$$1 + 1 =$$

$$8 + 8 =$$

$$6 + 6 =$$

* Ask your child to give you one example of a doubles fact ($3 + 3 = 6$) and one example of an addition sentence that is not a doubles fact ($3 + 5 = 8$).

Learn

Doubles plus one

$$\begin{array}{r} 5 \\ + 5 \\ \hline 10 \end{array}$$

$$\begin{array}{r} 5 \\ + 6 \\ \hline 11 \end{array}$$

$5 + 5 = 10$ is
a doubles fact.

$5 + 6 = 11$ is
a doubles plus one fact.

$5 + 5 = 10$
is a doubles fact.
 $5 + 6 = 11$
is a doubles plus one fact.

check

Write the sums.

$$\begin{array}{r} 6 \\ + 6 \\ \hline \end{array}$$

$$\begin{array}{r} 6 \\ + 7 \\ \hline \end{array}$$

$$\begin{array}{r} 0 \\ + 0 \\ \hline \end{array}$$

$$\begin{array}{r} 0 \\ + 1 \\ \hline \end{array}$$

Notes for parents

- Have your child tell you the doubles facts and the doubles plus one facts for 3 as $3 + 3 = 6$, so $3 + 4 = 7$
- Your child can think $3 + 4$ as $(3 + 3 = 6$ plus $1 = 7)$ or $(4 + 4 = 8$ minus $1 = 7)$.

Learn Counting on to add

Count on to find the sum. Start with the greater number to make counting easier.

What is $8 + 2$?

Say 8
Count on 2 more.
9, 10
The sum is 10

$$\begin{array}{r} 8 \\ + 2 \\ \hline 10 \end{array}$$

What is $4 + 12$?

Say 12
Count on 4 more.
13, 14, 15, 16
The sum is 16

$$\begin{array}{r} 4 \\ + 12 \\ \hline 16 \end{array}$$

When you add, the answer is called the sum.

Circle the greater number. Count on to find the sum.

$$\begin{array}{r} 6 \\ + 2 \\ \hline 8 \end{array}$$

$$\begin{array}{r} 5 \\ + 8 \\ \hline \end{array}$$

$$\begin{array}{r} 9 \\ + 3 \\ \hline \end{array}$$

$$\begin{array}{r} 4 \\ + 7 \\ \hline \end{array}$$

$$\begin{array}{r} 5 \\ + 2 \\ \hline \end{array}$$

$$\begin{array}{r} 8 \\ + 9 \\ \hline \end{array}$$

$$\begin{array}{r} 12 \\ + 7 \\ \hline \end{array}$$

$$\begin{array}{r} 9 \\ + 10 \\ \hline \end{array}$$

• When you count on to find the sum, your child can start with the smaller number, but it is easier to start with the greater one.

Learn Counting on to subtract

Count on to find the difference. Start with the smaller number.

What is $7 - 4$?

Use your fingers to count on after 4 to reach 7.

When you subtract, the answer is called the **difference**.

$$\begin{array}{r} 7 \\ - 4 \\ \hline 3 \end{array}$$

You raised 3 fingers.

Check

Circle the smaller number. Count on to find the difference.

$$\begin{array}{r} 9 \\ - 5 \\ \hline 4 \end{array}$$

$$\begin{array}{r} 12 \\ - 7 \\ \hline \end{array}$$

$$\begin{array}{r} 8 \\ - 2 \\ \hline \end{array}$$

$$\begin{array}{r} 10 \\ - 5 \\ \hline \end{array}$$

$$\begin{array}{r} 13 \\ - 4 \\ \hline \end{array}$$

$$\begin{array}{r} 15 \\ - 9 \\ \hline \end{array}$$

$$\begin{array}{r} 16 \\ - 8 \\ \hline \end{array}$$

$$\begin{array}{r} 22 \\ - 12 \\ \hline \end{array}$$

- Your child also can count back to find the difference $7 - 4$. Start with the greater number 7 and count 4 backwards (6, 5, 4, 3), the answer is 3.

Learn Make a 10 to add

You make a 10
and have 3 extra.

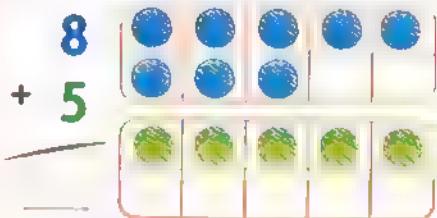

Find the sum of $8 + 5$

First way

Show 8.

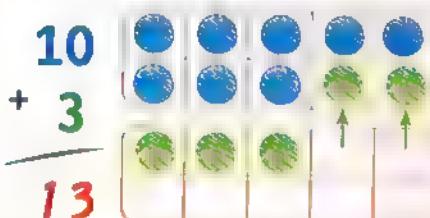

Then show 5.

Make a ten.

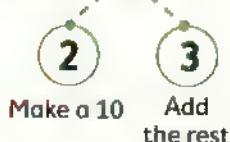

8 is close to 10

Move 2 counters into the ten frame.

Second way

$$8 + 5$$

Break apart the 5.
Use 2 to make a ten.

$$8 + 2 = 10 \text{ and } 10 + 3 = 13$$

$$\text{So, } 8 + 5 = 13$$

Check

Make a ten to add.

$$(3 + 8)$$

$\underline{\quad} + \underline{\quad} = \underline{\quad}$

$$(7 + 9)$$

$\underline{\quad} + \underline{\quad} = \underline{\quad}$

$$(5 + 7)$$

$\underline{\quad} + \underline{\quad} = \underline{\quad}$

* Ask your child how to make a ten when adding 7+4.

Find the difference of $14 - 6$

$$(14 - 6)$$

Break apart the 6.
Use 4 to make a ten.

$$14 - \textcircled{4} = 10 \text{ and } 10 - \textcircled{2} = 8$$

$$\text{So, } (14 - 6 = 8)$$

Check

Make a ten to subtract.

$$14 - 9 = \underline{\quad}$$

$$16 - 9 = \underline{\quad}$$

$$13 - 5 = \underline{\quad}$$

Lessons
27 & 28

Comparing numbers using $>$, $<$ or $=$

Learn

- When comparing 3-digit numbers, compare the hundreds first.

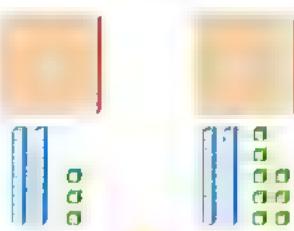

If the hundreds are the same, compare the tens.

40 is greater than 30
So, 241 is greater than 234

$$241 > 234$$

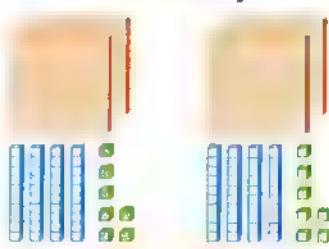

If the hundreds and tens are the same, compare the ones.

3 is less than 8
So, 123 is less than 128

$$123 < 128$$

If the hundreds, tens and ones are the same, then the numbers are equal.

247 is equal to 247

$$247 = 247$$

- Use the value of each digit to compare numbers.

First compare the hundreds digits.

$$672 \quad 675$$

6 hundreds = 6 hundreds

If the hundreds digits are the same, compare the tens digits.

$$672 \quad 675$$

7 tens = 7 tens

If the tens digits are the same, compare the ones digits.

$$672 \quad 675$$

2 ones < 5 ones

So, 672 is less than 675
 $672 < 675$

- When comparing 3-digit number and 2-digit number, the 3-digit number is the greater.

$$352 \quad > \quad 98$$

352 has 300 hundreds but 98 has 0 hundreds.

Lessons 31 & 32

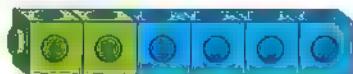

- Commutative property of addition
- Counting on and counting back

Learn Commutative property of addition

You can add in any order and the sum is the same.

I write $4 + 2 = 6$
for this train.

$$4 + 2 = 6$$

When I turn the
train around, I can
write $2 + 4 = 6$.

Then the addition is commutative.

Check

Find the sum. The first one is done for you.

$$3 + 8 = 11$$

$$8 + 3 = 11$$

$$\begin{array}{r} 5 \\ + 3 \\ \hline \end{array}$$

$$\begin{array}{r} 7 \\ + 11 \\ \hline \end{array}$$

$$3 + 9 =$$

$$9 + 3 =$$

$$\begin{array}{r} 5 \\ + 4 \\ \hline \end{array}$$

$$\begin{array}{r} 12 \\ + 3 \\ \hline \end{array}$$

$$1 + 8 =$$

$$8 + 1 =$$

$$\begin{array}{r} 6 \\ + 2 \\ \hline \end{array}$$

$$\begin{array}{r} 10 \\ + 7 \\ \hline \end{array}$$

Notes for parents

- Ask your child to use small cubes to show $6 + 3$ and $3 + 6$, and then ask him/her to tell you why the two sums are the same.

Learn

Counting on and counting back

Use count on to add

What is $5 + 24$?

Start at 24.

Then count on 5 more.

25, 26, 27, 28, 29

The sum is 29.

Then : $5 + 24 = \boxed{29}$

Use count back to subtract

What is $43 - 6$?

Start at 43.

Then count back 6.

42, 41, 40, 39, 38, 37

The difference is 37.

Then : $43 - 6 = \boxed{37}$

Check

Count on to find the sum.

$53 + 7 =$

$9 + 14 =$

$8 + 61 =$

$20 + 6 =$

$5 + 87 =$

Count back to find the difference.

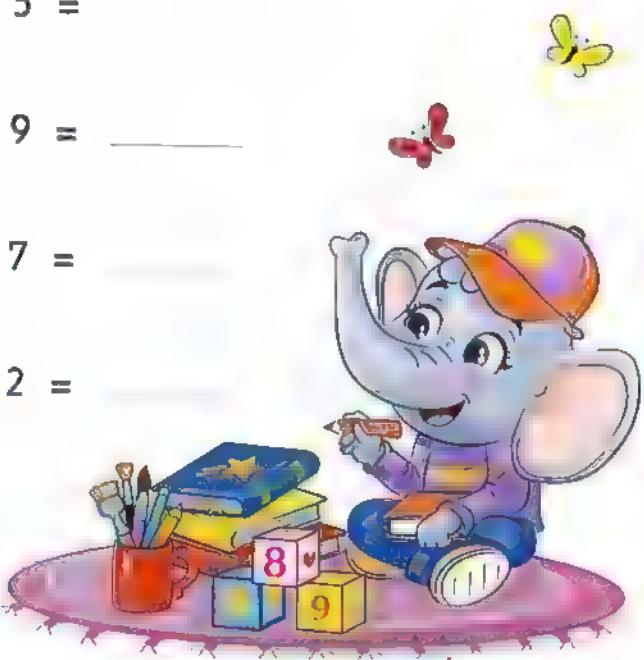

$31 - 1 =$

$26 - 5 =$

$44 - 9 =$

$13 - 7 =$

$60 - 2 =$

* Help your child add by count on starting with the greater number because it is easier than starting with the smaller number.

- How to subtract $56 - 24$?

First Way

Decompose by drawing sticks for tens and small squares for ones for the first number, then take away the second number to subtract.

$$(56) - (24) = (32)$$

I subtracted the ones

$$6 - 4 = 2$$

I subtracted the tens

Lesson 36

Estimation to add and subtract 2-digit numbers

Learn Using numbers chart to estimate

Estimation is finding a number that is close to another number.

Estimation makes the numbers easier to add and subtract.

You can use the 120 chart to estimate a 2-digit number.

- 12 is closer to 10
- 58 is closer to 60

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90

101	102	103	104	105	106	107	108	109	110
111	112	113	114	115	116	117	118	119	120

I can use the nearest ten to estimate.

Check

Use the 120 chart to estimate the following numbers.

a. 41 is closer to _____

b. 26 is closer to _____

c. 14 is closer to _____

d. 8 is closer to _____

e. 89 is closer to _____

f. 73 is closer to _____

g. 57 is closer to _____

h. 18 is closer to _____

i. 32 is closer to _____

- Make sure that your child understood the estimation.
- Find more numbers and ask your child to find the closer number.

Learn

Learn Estimation to add and subtract using place value

You can use place value to estimate in addition and subtraction.

Circle the highest place value in the first number and the second number.

Using tens can help you estimate.

Lesson 37

Accepted or not accepted estimation

Learn

- Estimate the sum of $23 + 31$

My estimation is 50.

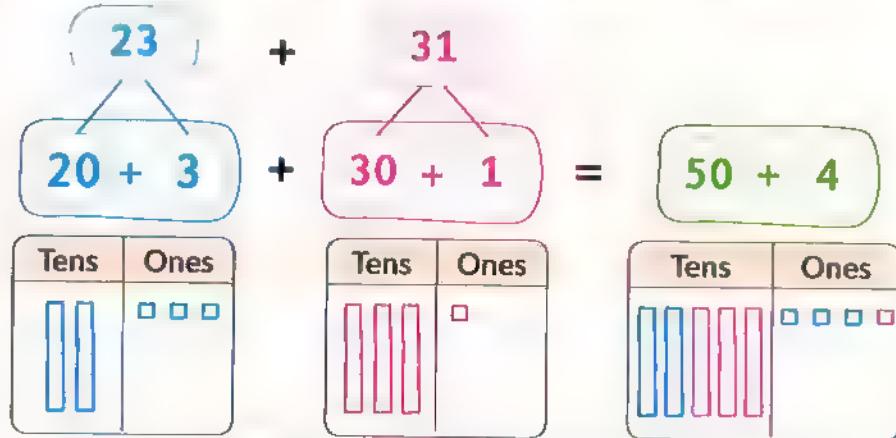

Think

By using the place value strategy.

$$20 + 30 = 50$$

So, the estimation is 50.

- Finding the actual sum to check if the estimation is accepted or is not accepted.

Add the ones : $3 + 1 = 4$

Add the tens : $20 + 30 = 50$

Find the actual sum : $50 + 4 = 54$

The actual sum is **close** to my estimation :

41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70

Then my estimation is **accepted**.

Notes for parents

- Tell your child that estimation does not give you the actual sum.
- Use the 120 chart to compare his/her estimation and the actual sum.

Learn

- Estimate the sum of $27 + 38$

By using the place value strategy.

So, the estimation is 50.

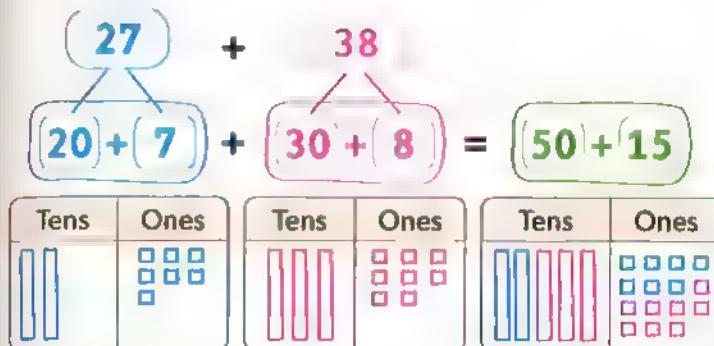

My estimation is 50.

Think

$$20 + 30 = 50$$

- Finding the actual sum to check if the estimation is accepted or is not accepted.

Add the ones : $7 + 8 = 15$

Add the tens : $20 + 30 = 50$

Find the actual sum : $50 + 15 = 65$

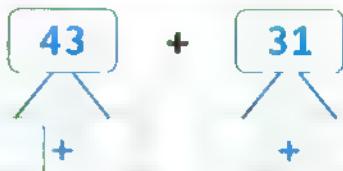

The actual sum is **not close to my estimation** :

41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70

Then my estimation is **not accepted**.
